## Introduction

No surprises from –  
delivering high-quality power products for more than 50 years.

Since power supplies are used in such a wide variety of applications, Technologies, Inc. offers a full line of DC and AC power supplies to meet your test requirements. Our family starts with high-value basic power supplies and goes up to high-performance products. In addition, we have specialty power supplies and three modular power supplies to give you the flexibility you need in test system development. For whatever application or industry you work in, power supplies offer excellent performance and high reliability to give you confidence when making your power supply purchase. Because knows how to make power supplies.

## In this guide:

### Power Supply Categories / 4

#### Selecting the Right DC Power Supply / 5 - 8

#### DC Voltage and Current At a Glance / 9 - 10

#### DC Power Supply Details

- **New** E36100, E3600 and U8000 Series Basic Power Supplies / 11
- 6030 Series Basic Autoranging DC Power Supplies / 12
- N5700 and N8700 Series Basic DC Power Supplies / 13
- N8900 Series Autoranging System DC Power Supplies / 14
- 6600 Series High-Performance DC Power Supplies / 15
- B2961A/B2962A 6.5 Digit Low Noise Power Source / 16
- N6900 and N7900 Advanced Power System (APS) / 17
- N6700 Low-Profile Modular Power System / 18
- High-Power N6700 DC Power Modules / 18
- N6705B DC Power Analyzer / 19
- 66000 Modular Power System / 20

#### DC Electronic Loads / 21

#### AC Single-Phase Power Sources

- AC6800 Series Basic AC Power Sources / 22
- 6800 Series AC Power Source/Analyzers / 22

#### Application-Specific Power Products

- **New** N6780 Series Source/Measure Units / 23
- B2900A Series Precision Source/Measure Units / 24
- U2720 USB Modular Source Measure Units / 25
- E5260A/E5270B Precision IV Analyzer/Source Monitor Unit Mainframe Series / 26
- B1500A Semiconductor Device Analyzer / 27
- B1505A Power Device Analyzer/Curve Tracer / 28
- B1506A Power Device Analyzer for Circuit Design / 29
- B1507A Power Device Capacitance Analyzer / 30
- N6783A Application-Specific Modules / 31
- 66300 Mobile Communications DC Sources / 32
- E4360 Modular Solar Array Simulators / 33
- **New** N8937APV and N8957APV Photovoltaic Array Simulators / 34
- **New** PA2201A IntegraVision Power Analyzer / 35

## Power Supply Categories

### Basic

Affordable, quiet and stable power supplies for both manual and simple computer-controlled operation. The line of basic power supplies is optimized to provide DC power in applications where speed and accuracy are a low consideration. These power supplies are a high-value fit for the bench and in a system rack.

### Performance

Speed, accuracy and advanced programming features make the performance power supplies the right choice when the DC power supply is a factor in test performance. With features such as *DUT* protection, fast programming times and downloadable V and I sequences, these DC power supplies can reduce your risk during test and system development.

### Specialty

Sometimes it is best to have a power supply with unique capabilities that are tailored to a specific application. For example, the 66300 Mobile Communications DC Sources are designed to emulate the unique characteristics of a battery for mobile device testing and maintain those characteristics even when using long load leads, such as in an ATE system. The E4360 Solar Array Simulator simulates solar panel I-V characteristics for satellite development and testing.

### Modular

offers fully programmable power supplies in a modular format: the N6700 low-profile modular power system, N6705B DC power analyzer, and 66000 modular power system series. With this feature, you now have an extensive choice of power options— from basic through performance. Additionally, all modules interact in the same way at a single interface node, which simplifies system architecture and reduces cost when the test system inevitably changes.

### AC Sources

provides a full line of basic and performance AC sources to help you test a variety of AC-powered devices. Basic sources provide reliable power while performance sources provide advanced measurements and waveform generation.

### DC Electronic Loads

Electronic loads sink current and dissipate power in an accurate and controlled manner. Connected to circuit under test, an electronic load provides a convenient way to vary the load on the circuit's output in order to understand the circuit's performance. offers two families of electronic loads—a single output family and a modular, multiple output family.

## Selecting the Right DC Power Supply For Your Application

When you need just a basic power supply, it's quite easy to pick the right one based on your voltage and current requirements. The voltage and current tables are found on pages 9 - 10. From there you can go to the product page(s) for more detail.

When you have specialized requirements that need features such as source and measure, it is quite easy to select from a set of power supplies that are designed exactly for those requirements. Refer to page 23 for specialty power products.

But when you have more complex requirements and you know the power supply is an important part of your test bench, where do you start and what do you need to consider?

Of course you need to select the right voltage and current, but there are other factors to consider when selecting a DC power supply for your applications. This guide gives a definition of the feature, states why it's important, and tells you how to use that feature when specifying the right power supply. In addition, the product families are listed so you can quickly see which product best fits your application. With that information, you can go to the product pages for detailed specifications.

Use the following information to help select the features you need in a DC power supply. Then go to the product page(s) for more detail.

### Output Characteristics

		<b>LOW ripple and noise &lt;10 mVp-p</b>		<b>MEDIUM ripple and noise 5-500 mVp-p</b>	
<b>Ripple and noise</b> Use the ripple and noise specification to determine what, if any, affects these variations will have on your circuit or device.	Ideally, an output is free from any variations in voltage. In practice, there are periodic variations, called ripple, and random variations, called noise. Typically specified as either $V_{rms}$ or $V_{p-p}$ , the most useful spec is $V_{p-p}$ . With $V_{p-p}$ you will know the maximum variation away from the DC setpoint.	6611C-55A	p15	66101A-06A	p20
		66309B-32A	p32	6671A-92A	p15
		B2961A-62A	p16	E36100 Series	p11
		E3600 Series	p11	N5700 Series	p13
		N6751A-66A	p18	N6731B-46B	p18
		N6781A-84A	p23	N6773A-77A	p18
		N6900 Series	p17	N6785A-86A	p23
		N7900 Series	p17	N8700 Series	p13
		U8031A-32A	p11	N8900 Series	p14
				U8001A-02A	p11
<b>Programming Accuracy</b> Use programming accuracy to determine if the power supply can produce a voltage and current within the precision needed by your device.	Programming accuracy is a measure of how closely the output will be to the setpoint. Specified as a percent of output plus an offset, you can calculate whether or not the power supply has the precision required. In addition, many power supplies have built-in voltmeters and ammeters to measure its output.	6620 Series	p15	6600 Series	p15
		B2961A-62A	p16	66100 Series	p19
		N6751A-66A	p18	E3600 Series	p11

		N7900 Series	p17	N6773A-77A	p17
				N6783A	p31
				N8700 Series	p13
				N8900 Series	p14
		U8000 Series	p11		

## Output Characteristics Continued

		<b>FAST output response &lt;15 ms</b>	<b>MEDIUM output response &lt;200 ms</b>
<b>Output Response</b> Use this specification to select the power supply that is fast enough for your application.	When the setpoint changes it will take some time before the output reaches the setting. How fast it reaches the setpoint is a result of its regulation design and the output bandwidth. The specifications are typically for a voltage change from 10% to 90% of its rated output or a load change of 50% to 100%.	6610A-55A 66300 Series B2961A-62A N6751A-66A N6781A-86A N6900 Series N7900 Series	p15 p32 p16 p18 p23 p17 p17 66101A-06A 6671A-92A E36100 Series N5700 Series N6731B-46B N6773A-77A N8700 Series N8900 Series U8001A-02A p20 p15 p11 p13 p18 p18 p13 p14 p11

## Control

		<b>Manual only</b>	<b>Computer and manual control</b>
<b>Computer Interface</b> Specify power supplies with the appropriate hardware and software interface for computer control.	Many DC power supplies have both manual and computer control. Some are only manually controlled. Hardware interfaces for DC power supplies include GPIB, USB, and LAN (LXI Core). Software interfaces include the SCPI language and drivers such as IVI-C, IVI-COM, and VXIplug&play.	E3620A-30A U8000 Series	p11 p11 All others

		<b>WITH analog input</b>	<b>WITHOUT analog input</b>
<b>Analog Voltage Control Signal</b> Specify a power supply with an analog input whenever you need to amplify the power or need to track an analog voltage.	Some power supplies provide an analog voltage control input to cause the voltage output to follow this input. Essentially, it amplifies the power since the power supply can provide current up to its rated maximum.	6640 Series 6650 Series N5700 Series N8700 Series N8900 Series	p15 p15 p13 p13 p14 All others

## Output Measurements

		<b>Built-in measurement</b>
<b>Measure V &amp; I Output</b> Specify power supplies with built-in measurements whenever you need to check the actual voltage and current.	Many power supplies have a built in voltmeter and ammeter to read back their own output. The measurements can be displayed on the front panel or queried by a computer connected to the interface. These measurements are particularly useful in computer- controlled systems. Measurement (or read back) accuracy is specified as a percent of full scale plus an offset.	All others

## Packaging

### Physical Size

Use the size specification to match bench or system use.

	QUARTER rack	MEDIUM output response <200 ms	FULL rack
--	--------------	--------------------------------	-----------

power supplies have standard EIA 19-inch rack dimensions. The width is either half rack width or full rack width while the height ranges from 1U to 5U (1.75 in to 8.57 in). While any size can be used on the bench or in a system rack, the half rack width is generally better for bench applications while the full rack width works well in system racks. Of special note is the 1U height of the N5700 and N6700 Series.

E36100 Series	p11	6610 Series B2961A-62A E3600 Series U8000 Series	p15 p16 p11 p11
---------------	-----	---	--------------------------

### Front or Rear Output Terminals

Select the model with its output terminals in the best location for your application on either the bench or in a system rack.

	FRONT terminals	REAR terminals
--	-----------------	----------------

The output terminals can be located on the front of the power supply or the rear. System and high-current power supplies have their outputs located on the rear panel while bench and some low current power supplies have outputs on the front.

6610A-55A B2961A-62A E3620A-30A E36100 Series N6705B U8000 Series	p15 p16 p11 p11 p19 p11	All others
--	--	------------

### Number of Outputs

Specify multiple outputs per unit when you need to save space on the bench or in a system rack.

	SINGLE outputs	MULTIPLE outputs
--	----------------	------------------

power supplies are configured with 1 to 8 outputs per unit. Multiple output power supplies can save space on the bench or in a rack. Of special note are the 66000 and N6700 modular mainframes that can hold up to 8 and 4 modules respectively.

All others	66000 mfr 6620 Series B2961A-62A E3620-31A E3646A-49A E4360 mfg N6700 mfr N6705B mfr U8031A-32A	p20 p15 p16 p11 p11 p33 p18 p19 p11
------------	---	---

mfr = mainframes for the E4360, N6700, N6707B, N6705B and 66000 modular power supplies

## Specialty

		WITH DUT protection	WITHOUT DUT protection	
<p><b>DUT protection</b></p> <p>Select power supplies with DUT protection whenever your load may be damaged by over voltage or over current.</p>	<p>Many power supplies can be set for a maximum voltage and current to protect the device under test (DUT). When set, the power supply will limit the voltage and/or current regardless of the load. This feature provides a margin of safety when something goes wrong.</p>	All others	E3620A-31A	p11
<p><b>Computer Interface</b></p> <p>Specify power supplies with the appropriate hardware and software interface for computer control.</p>	<p>Many DC power supplies have both manual and computer control. Some are only manually controlled. Hardware interfaces for DC power supplies include GPIB, USB, and LAN (LXI Core). Software interfaces include the SCPI language and drivers such as IVI-C, IVI-COM, and VXIplug&amp;play.</p>	66000 Series B2961A-62A E4360 Series N6700 Series N6705B N6900 Series N7900 Series	p20 p16 p33 p18 p19 p17 p17	All others
<p><b>Output disconnect or polarity reversal</b></p> <p>Select power supplies with optional output relays when your application requires power to be physically disconnected from the device.</p>	<p>Automatic connect, disconnect, and polarity reversal can be accomplished with programmable output relays. By doing so, you will eliminate an external relay and have an easy method to programmatically actuate the relay.</p>	66000 Series 6630 Series 66300 Series N6700 Series N7900 Series	p20 p15 p32 p18 p17	All others

\* Power modules that require a modular mainframe (66000 Series, N6700 Series, N6705)

\*\* Dual range power supplies; r1 denotes range 1; r2 denotes range 2

## NEW E36100, E3600 and U8000 Series Basic Power Supplies

### Essential features for a tight budget

When you need reliable power with minimal features, you can rely on the NEW E36100, E3600 and U8000 Series basic power supplies.

### NEW E36100 Series BASIC Power Supplies

#### Compact bench supplies

The NEW E36100 series features a high-contrast OLED display that is viewable from any angle, modern I/O connectivity, and saves valuable space with its compact size (2U, ¼ rack).

E36100 Series

- Up to 100V, up to 5A
- Clean and stable DC power
- Excellent programming and read-back accuracy
- LAN (LXI Core), and USB

### E3600 and U8000 Basic Power Supplies

The E3600 Series offers an extensive choice of voltages, programmability, and number of outputs.

The U8000 Series offers more affordable DC power and provides features typical only found in programmable power supplies (like output sequencing, save/recall, and more).

- 30 W to 375 W outputs, 6 V to 60 V, and 0.5 A to 20 A
- Single- to triple-output models
- Low noise, linear regulation
- Dual range outputs to provide more current at lower voltage settings

\* Output 1 / Output 2 / Output 3

\*\* NOTE: RU refers to rack unit of a standard 19" EIA equipment rack. The width is either 1/2 or full. The height is in number of rack units which are 1.75" (44.4 mm) each. For example: a 3 RU h has a height of 5.25" (133.3 mm)

## 6030 Series Basic Autoranging DC Power Supplies

Autoranging to do the job of multiple power supplies

The 6030 Series basic power supplies offer autoranging outputs that give you maximum power at a variety of operating voltages. This enables you to use one power supply to do the job of multiple power supplies, saving rack space and reducing your system complexity.

- 240 W to 1200 W outputs, up to 500 V, and up to 120 A
- Built-in measurements and advance programming features simplify system design
- Full protection from over voltage and over current
- Computer control via GPIB

6032A

\* NOTE: RU refers to rack unit of a standard 19" EIA equipment rack. The width is either 1/2 or full. The height is in number of rack units which are 1.75" (44.4 mm) each. For example: a 3 RU h has a height of 5.25" (133.3 mm)

## N5700 Series and N8700 Series Basic DC Power Supplies

Space-saving basic power with modern interfaces

Now get up to 5200 W in a compact, 2U package with the N8700 Series or up to 1560 W in a compact, 1U package with the N5700 Series. Both series offers solid performance and a variety of basic and enhanced capabilities.

- Remote programming via GPIB, LAN and USB interfaces with the SCPI command set (drivers available)
- Analog control and monitoring of output voltage and current
- Connect multiple supplies in parallel or series for greater output current or voltage respectively
- Built-in measurements
- Front panel control and advanced programmable features
- Built-in protection features such as OVP, OCP, UVL, and OTP
- LXI Core compliant

## N8900 Series Autoranging System DC Power Supplies

High-power, autoranging output does the job of multiple supplies

The N8900 Series autoranging DC power supplies provide unprecedented flexibility by offering a wide range of voltage and current combinations at full power. Just one N8900 does the job of multiple power supplies! It's like having many power supplies in one!

- Up to 1500 V, up to 510 A
- 5 kW, 10 kW and 15 kW models in a small 3U package
- Easily parallel to create "one" power supply with > 100 kW of power
- Protection from over-voltage, over-current and over-temperature
- Control via GPIB, USB, LAN (LXI Core), and analog programming

### NEW N8900 Series Pre-wired Rack Systems Up to 90 kW

- Reduced system assembly and design time
- Prewired control of up to six 15-kW N8900 power supplies (30 to 90 kW)
- Control of the system as if it were one high-power supply, using the N8900 Series power supplies' smart paralleling capability
- LAN (LXI Core), USB, and GPIB I/O all standard

## 6600 Series High-Performance DC Power Supplies

High-performance when the power supply matters to test

The 6600 Series high-performance power supplies are designed to meet your most demanding requirements. With an extensive feature set, the 6600 Series can help you reduce test time and simplify your test system design.

- 40 W to 6600 W outputs, up to 120 V, and up to 875 A
- Fast, low-noise outputs increase your test throughput
- Extensive programming capability for flexible system design
- Built-in measurements and advanced programming features simplify system design
- Computer control via GPIB

## B2961A/62A 6.5 Digit Low Noise Power Source

The B2961A/B2962A 6.5 Digit Low Noise Power Source is an advanced low cost power supply/source offering:

- 6.5 digit precision, wide and bipolar (4-quadrant) output
- Both voltage (100 nV – 210 V) and current (10 fA – 3A DC/10.5 A pulsed) source modes
- 10  $\mu$ Vrms (1 nVrms/ $\sqrt{\text{Hz}}$  at 10 kHz) output noise with external ultra-low noise filter
- 100 nV/10 fA sourcing resolution
- Precision arbitrary waveform generation capability (1 mHz – 10 kHz)
- Programmable output resistance and emulation
- Time domain voltage/current monitoring on the front panel

These superior capabilities allow tests and evaluation that conventional power supply/sources cannot do. They make the B2961A and B2962A ideal companion instruments for use with other instruments such as oscilloscopes, network analyzers, spectrum analyzers, frequency counters, digital multi meters, nanovoltmeters, etc. The B2961A/B2962A can support the difficult measurement challenges faced by researchers, electronic development engineers and electronic technicians working on advanced devices and materials.

Since the B2961A & B2962A are highly stable current/voltage sources ideal for evaluating the physical properties of materials and many types of samples, they ensure that you can detect all tiny signal variations emanating from materials under test.

B2961A/62A

## NEW N6900 and N7900 Advanced Power System (APS)

Overcome your toughest power test challenges

With Advanced Power System (APS) 1 kW and 2 kW system power supplies, you get a new level of power supply performance. VersaPower architecture delivers industry-leading specifications and innovative features for today's advanced ATE power testing needs—the fastest, most accurate, integrated power system.

- Accelerate test-system throughput with industry-leading speed
- Capture your DUT's current profile with accurate measurements
- Reduce your ATE development time and cost with highly integrated capabilities

### Need high performance in your ATE system?

Choose the N6900 Series APS DC Power Supply.

### Need high speed dynamic sourcing and measurement?

Choose the N7900 Series APS Dynamic DC Power Supply.

### Get lots of power in a small test-system footprint

Two power ranges deliver a large amount of power in a small test-system footprint.

Overcome a wide variety of power test challenges with the APS

	Building a continuous source and load		Generating power transients		Properly powering on/off a DUT
	Increasing test system throughput		Characterizing inrush current		Tracking power events for root-cause analysis
	Protecting against power related damage		Characterizing dynamic current profiles		Maintaining output integrity under dynamic load conditions

## N6700 Low-Profile Modular Power System

Extensive family of modular power in a 1U package

The N6700 Series 1U-high, multiple-output programmable DC power supply system gives you the flexibility to optimize performance, power and price to match your test needs.

- Small size: up to 4 outputs in 1U of rack space
- Mainframes are available with 400 W, 600 W, or 1200 W capability
- Mix and match from 36 different DC power modules, ranging 50 W, 100 W, 300 W, or 500 W
- Streamline your tasks with built-in measurements, output sequencing, and optional LIST mode, built-in digitizer and disconnect relays
- Ultra fast command processing time (< 1 ms) reduces test time
- Computer control via GPIB, USB, and LAN (LXI Core)

#### Specialty

Additional N6780 series source measure unit modules and application specific modules available, see page 23.

\* NOTE: RU refers to rack unit of a standard 19" EIA equipment rack. The width is either 1/2 or full. The height is in number of rack units which are 1.75" (44.4 mm) each. For example: a 3 RU h has a height of 5.25" (133.3 mm)

## N6705B DC Power Analyzer

Quickly understand your device's power consumption

Gain insight into your device's power consumption in minutes without writing a single line of code. The N6705B combines one to four DC power supplies, a DMM, an oscilloscope, an arbitrary waveform generator, and a data logger in one integrated package.

- Saves time—no programming required and it eliminates the need to gather multiple instruments
- Flexible, modular system—mix and match power modules to optimize your testing
- Uses the same modules as the N6700 Series low-profile modular power supply—see page 15
- Computer control via GPIB, USB, and LAN (LXI Core)

Function	Description
Output speed	Voltage changes as fast as 160 $\mu$ s per step voltage change
Voltmeter accuracy	Up to 0.025% + 50 $\mu$ V, up to 18-bit resolution
Ammeter accuracy	Up to 0.025% + 8 nA, up to 18-bit resolution
Arbitrary Waveform	Bandwidth up to 100 kHz, output power up to 300 W
Scope function	Digitizes voltage and current at up to 200 kHz, up to 512 k points, up to 18-bits resolution
Data logger function	Measurement interval from 20 $\mu$ s to 60 s, maximum of 500 Mreadings per data log
Non-volatile data storage	4 GB

## 66000 Modular Power System

Speed and accuracy with up to eight outputs

The 66000 Series modular DC power supplies give you up to eight outputs per mainframe. The modular design conserves rack space and simplifies system cabling and assembly.

- Modular system permits up to 8 outputs of 150 W per output in 4U of rack space
- Modules are available with 150 W, 8 V to 200 V, 0.75 A to 16 A
- Simplify reconfiguration or repair with easily swappable modules
- Streamline your tasks with built-in measurements, LIST mode, and optional keyboard for manual control
- Full protection from over voltage and over current
- Computer control via GPIB

\* NOTE: RU refers to rack unit of a standard 19" EIA equipment rack. The width is either 1/2 or full. The height is in number of rack units which are 1.75" (44.4 mm) each. For example: a 3 RU h has a height of 5.25" (133.3 mm)

## N3300 and 6060 Series DC Electronic Loads

### Programmable loads with measurements

The N3300 and 6060 Series DC electronic loads give you flexibility for testing power supplies and other devices requiring a load. The built-in measurement system provides both accuracy and convenience and eliminates the need for a DMM, external shunts and wiring.

The N3300 multiple-input models are fast, accurate, and ideal for high-volume manufacturing, while single input 6060 models are ideal for evaluation of DC power sources and power components on your bench.

### N3300 Multiple Input Electronic Loads

- Increase test throughput with short command processing time and stored command sequences
- Test multiple power supply outputs with up to 6 modules with 150 W to 600 W capability
- Operate in constant current, constant voltage, or constant resistance modes
- Measure voltage and current simultaneously
- Use in parallel for greater current sinking capability
- Computer control with GPIB

#### N3300 mainframes

Model	Max # modules	Physical size*
N3300A	6	Full RU w x 4 RU h
N3301A	2	½ RU w x 4 RU h

#### N3300 modules

Model	Input power, W		Maximum input, V	Maximum input, I	Constant current accuracy, % + mA	Constant voltage accuracy, % + mV	Current measurement accuracy, % + mA	Voltage measurement accuracy, % + mV	Width, slot
	N3302A	150	60	30	0.1 + 10	0.1 + 8	0.05 + 6	0.05 + 8	1

N3307A	250	150	30	0.1 + 15	0.1 + 20	0.05 + 6	0.05 + 16	1	

### 6060 Single Input Electronic Loads

- Cost effective load for single input applications
- Ideal for bench applications, provides optional front panel connection
- Computer control via GPIB

#### 6060 loads

Model	Input power, W		Maximum input, V	Maximum input, I	Constant current accuracy, % + mA	Constant voltage accuracy, % + mV	Current measurement accuracy, % + mA	Voltage measurement accuracy, % + mV	Size*
	6060B	300	60	60	0.1 + 75	0.1 + 50	0.05 + 65	0.05 + 45	Full RU w
6063B	250	240	10	0.15 + 10	0.12 + 120	0.12 + 10	0.1 + 150	x 4 RU h	

\* NOTE: RU refers to rack unit of a standard 19" EIA equipment rack. The width is either 1/2 or full. The height is in number of rack units which are 1.75" (44.4 mm) each. For example: a 3 RU h has a height of 5.25" (133.3 mm)

## AC Single-Phase Power Sources

### An integrated AC power solution

offers two families of AC power sources to meet your AC test challenges—from basic to complex. The AC6800 Series of basic AC sources offer stable, reliable power with models available up to 4000 VA. The 6800B series of performance AC sources provide a complete AC test solution with built in arbitrary waveform generator to simulate many types of power waveforms, at power levels up to 1750 VA. Both families may also be used to produce DC power, either alone or as a DC offset to an AC waveform. All models are backed with global support and the longest standard warranty in the industry.

### AC6800 Series Basic AC Sources

The quality and capability you need.

- Models up to 4000 VA are available to meet your basic AC power source and measurement requirements
- An intuitive user interface tested over time
- LAN/LXI Core and USB (standard), and GPIB (optional plug-in card)

	Model	RMS power	RMS voltage	RMS current	Output frequency	Peak current	DC power	DC voltage
Basic	AC6801A	500 VA	270 V	5 A	500 Hz	7.5 A	400 W	380 V
	AC6802A	1000 VA	270 V	10 A	500 Hz	15 A	800 W	380 V
	AC6803A	2000 VA	270 V	20 A	500 Hz	30 A	1600 W	380 V
	AC6804A	4000 VA	270 V	40 A	500 Hz	60 A	3200 W	380 V
Performance	6811B	375 VA	300 V	3.25 A	1 kHz	40 A	285 W	425 V
	6812B	750 VA	300 V	6.5 A	1 kHz	40 A	575 W	425 V
	6813B	1750 VA	300 V	13 A	1 kHz	80 A	1350 W	425 V

### 6800B Series Performance AC Sources/Analyzers

The complete AC power test solution.

- Models up to 1750 VA are available to meet your performance AC source requirements
- Extensive built-in power measurement capabilities
- GPIB
- Integrated transient waveform generation and harmonic capabilities to simulate and analyze your AC environment

## NEW N6780 Series Source Measure Units (SMUs)

### Deliver exceptional battery life

The N6781A and **NEW** N6785A are 2-quadrant SMUs for battery drain analysis. They offer advanced features to accurately capture the power consumption of portable, battery-powered devices from 20 W to 80 W. Whether the DUT is a mobile phone, “phablet,” tablet, or pacemaker, the N6781A and N6785A’s seamless measurement ranging, programmable output resistance, and auxiliary DVM helps you deliver exceptional battery life.

The N6782A and **NEW** N6786A are 2-quadrant SMUs for function test of a device from 20 W to 80 W. It has the ability to modulate its output up to 100 kHz along with the capability to source and sink current.

The N6784A is a 4-quadrant SMU that provides precise sourcing and measurement for general purpose applications.

The N6780 source measure units (SMUs) are modules for the N6705B DC power analyzer mainframe for R&D, and the N6700 low-profile mainframes for ATE.

- Seamless, dynamic measurements down to nA and  $\mu\text{V}$  (N6781A/82 and N6785A/86 only)
- Glitch-free operation—change sourcing ranges or measurement ranges without any glitches
- Excellent transient response for stable output voltage with dynamic loads
- 2 or 4-quadrant operation: use as a DC power supply or electronic load
- Fast modulation of DC output to create arbitrary waveforms up to 100 kHz
- Computer control via GPIB, USB, and LAN (LXI Core)

#### N6705B DC Power Analyzer

##### Flexible/reconfigurable

Available slots	Mainframe accepts up to 4 DC power modules
Power	600 W total DC module output power
Instrument control	GPIB, USB, LAN (LXI Class C Compliant)

#### N6780 SMU modules

	Model	Power (W)	Max voltage (V)	Max current (A)	Ripple and noise (mVp-p)	Programming accuracy % + $\mu\text{V}$	Transient response ( $\mu\text{s}$ )
Specialty	N6781A	20	20	$\pm 3$	12	0.025 + 200	$\leq 35$
	N6782A	20	20	$\pm 3$	12	0.025 + 200	$\leq 35$
	N6784A	20	$\pm 20$	$\pm 3$	12	0.025 + 200	$\leq 35$
	<b>New</b> N6785A	80	20	$\pm 8$	15	0.025 + 1800	$\leq 35$
	<b>New</b> N6786A	80	20	$\pm 8$	15	0.025 + 1800	$\leq 35$

### 14585A Control and Analysis Software

The software for the DC power analyzer complements the front panel of the N6705 mainframe, offering advanced functionality and PC control. It is a flexible R&D tool for any application. When used to control an N6781A or N6785A SMU, it can be used for advanced battery drain analysis applications.

- Control and analyze data from up to four N6705 DC power analyzer and any installed modules at once
- Easily create complex waveforms to stimulate or load down a DUT by inputting a formula, choosing from built-in, or importing waveform data.
- Data log (gapless) measurements directly to a PC
- Perform statistical analysis of power consumption

## B2900A Series Precision Source/Measure Units

The B2900A Series of Precision Source/Measure Units are compact and cost-effective bench-top Source/Measure Units (SMUs). The SMU combines the capabilities of a current source, a voltage source, a current meter and a voltage meter along with the capability to switch easily between these various functions into a single instrument. It offers:

- Test capability up to 210 V and 3 A (DC) or 10.5 A (pulsed) with a single instrument
- Best-in-class 6.5 digit source and measurement resolution down to 10 fA and 100 nV
- 10  $\mu$ s digitizing capability
- Innovative GUI facilitate fast bench-top test, debug and characterization
- Ultrafast throughput for lower cost-of-test

These capabilities are ideal for a wide variety of IV (current versus voltage) measurement tasks that require both high resolution and accuracy. The innovative graphical user interface with four viewing modes (single view, dual view, graph view and roll view) improves usability and productivity of bench-top tests, debug and characterization dramatically. The B2900A series of SMU is also well-suited for production with the fast measurement speed.

		B2901A	B2902A	B2911A	B2912A	
Specialty	Number of channels	1	2	1	2	
	Max output	Voltage	DC	$\pm 210$ V	$\pm 210$ V	$\pm 210$ V
			Pulsed	$\pm 10.5$ A	$\pm 10.5$ A	$\pm 10.5$ A
		Current	DC	$\pm 3.03$ A	$\pm 3.03$ A	$\pm 3.03$ A
		Pulsed	$\pm 10.5$ A	$\pm 10.5$ A	$\pm 10.5$ A	$\pm 10.5$ A
		Power	31.8 W	31.8 W	31.8 W	31.8 W
	Source	Max digits	Digits	5 ½	5 ½	6 ½
		Min resolution	Voltage	1 $\mu$ V	1 $\mu$ V	100 nV
			Current	1 pA	1 pA	10 fA
	Measurement	Max digits	Digits	6 ½	6 ½	6 ½
Max resolution		Voltage	100 nV	100 nV	100 nV	100 nV
		Current	100 fA	100 fA	10 fA	10 fA
	Min programmable interval for List sweep/AWG waveform	20 $\mu$ s	20 $\mu$ s	10 $\mu$ s	10 $\mu$ s	
	Min trigger interval for digitizing (Max sample rate)	20 $\mu$ s (50,000 pts/s)	20 $\mu$ s (50,000 pts/s)	10 $\mu$ s (100,000 pts/s)	10 $\mu$ s (100,000 pts/s)	

## USB Modular Source Measure Unit

Source and measure DC voltage/current reliably

The USB modular source measure unit (SMU) allows you to perform sweeps and make measurements using a single device. The SMU offers voltage and current programming/readback with high accuracy measurement capabilities. You can configure each of the three channels separately or in a matrix—in series or parallel—for increased power. It comes bundled with Measurement Manager (AMM) software that includes a command logger function to help you convert SCPI commands into snippets of VEE, V, C+ and C# code.

- Three-channel, four-quadrant operation ( $\pm 20$  V,  $\pm 120$  mA)
- High measurement sensitivity of 100 pA with 16-bit resolution
- 0.1% basic accuracy
- Low current measurement capability down to nA levels
- Embedded test script able to support three channels with coherent source and measurement capabilities (for U2723A)
- IV Curve application support in the Measurement Manager Software (for U2723A)
- Faster rise/fall time (for U2723A)
- Hi-Speed USB 2.0 (480 Mbps)

<b>Model</b>	<b>U2722A/23A</b>
Number of outputs	3
<b>Output ratings (at 0 °C to 50 °C)</b>	
Voltage	-20 V to 20 V per channel
Current	-120 mA to 120 mA per channel

<b>Model</b>		<b>U2722A/23A</b>		
		<b>Range</b>	<b>Accuracy<sup>1</sup></b>	<b>Resolution</b>
<b>Specialty</b>	<b>Voltage programming/readback</b>	$\pm 2$ V	0.075% + 1.5 mV	0.1 mV
		$\pm 20$ V	0.05% + 10 mV	1 mV
	<b>Current programming/readback</b>	$\pm 1$ $\mu$ A	0.085% + 0.85 nA	100 pA
		$\pm 10$ $\mu$ A	0.085% + 8.5 nA	1 nA
		$\pm 100$ $\mu$ A	0.075% + 75 nA	10 nA
		$\pm 1$ mA	0.075% + 750 nA	100 nA
	$\pm 10$ mA	0.075% + 7.5 $\mu$ A	1 $\mu$ A	
	$\pm 120$ mA	0.1% + 100 $\mu$ A	20 $\mu$ A	

U2722A

<b>Model</b>		<b>U2722A</b>	<b>U2723A</b>	
<b>Specialty</b>	<b>Rise/fall time (ms)<sup>1</sup></b>	<b>Range</b>	<b>Accuracy<sup>1</sup></b>	
		$\pm 1$ $\mu$ A	170.0	15.0
		$\pm 10$ $\mu$ A	18.0	5.0
		$\pm 100$ $\mu$ A	6.0	1.0
		$\pm 1$ mA	1.0	1.0
		$\pm 10$ mA	1.0	1.0
	$\pm 120$ mA	1.0	1.0	

<sup>1</sup> Drive 50% of 1 V or 10 V output with a resistive load. Rise time is from 10% to 90% of program voltage change at maximum current. Fall time is from 90% to 10% of program voltage change at maximum current.

<sup>2</sup> Measurements obtained are per default bandwidth setting.

## Precision IV Analyzer / Source Monitor Unit Mainframe Series

Precision IV Analyzer Series (E5262A, E5263A, E5260A and E5270B) is the complete solution for current-voltage characterization. It supports multiple SMUs (Source/Monitor

Units) for voltage/current sourcing and voltage/current measurement with the best in the class current measurement performance. Its modular architecture allows you to configure or upgrade SMU modules for available eight slots (E5260A/E5270B)

The EasyEXPERT group+ GUI based characterization software is furnished and available on your PC. It supports efficient and repeatable device characterization in the entire characterization process from measurement setup and execution to analysis and data management either by interactive manual operation or automation across a wafer in conjunction with a semi-automatic wafer prober. EasyEXPERT group+ makes it easy to perform current-voltage characterization immediately with the ready-to-use measurements (application tests) furnished, and allows you the option of storing test condition and measurement data automatically after each measurement in a unique built-in database (workspace), ensuring that valuable information is not lost and that measurements can be repeated at a later date.

Powerful integration of SMU's versatile measurement capabilities and GUI based characterization software makes it the best solution for characterization and evaluation of devices, materials, semiconductors, active/passive components, or virtually any other type of electronic device with uncompromised measurement reliability and efficiency.

The Precision IV Analyzer Series is also available as a system component SMU for a rack and stuck test system. It provides the scalability and the highest measurement accuracy in the class for current-voltage measurement. It can be controlled remotely by the FLEX command set supporting the powerful measurement capabilities.

8 slot mainframe SMU configurable model (E5260A/E5270B)

Two SMU pre-fixed configuration model (E5262A/E5263A)

		Precision IV Analyzer series			
		E5262A	E5263A	E5260A	E5270B
MPSMU (Medium Power SMU)	Max. output	100 V / 200 mA	100 V / 200 mA	100 V / 200 mA	100 V / 100 mA
	Min. resolution	5 pA / 100 μV	5 pA / 100 μV	5 pA / 100 μV	10 fA / 0.5 μV
HPSMU (High Power SMU)	Max. output	NA	200 V/1 A	200 V/1 A	200 V/1 A
	Min. resolution	NA	5 pA / 100 μV	5 pA / 100 μV	10 fA / 2 μV
HRSMU (High Resolution SMU)	Max. output	NA	NA	NA	100 V / 100 mA
	Min. resolution	NA	NA	NA	1 fA / 0.5 μV
ASU (*) (Atto-sense Switch Unit)	Max. output	NA	NA	NA	100 V / 100 mA
	Min. resolution	NA	NA	NA	0.1 fA / 0.5 μV

(\*) One ASU requires one HRSMU module to connect it.

## Semiconductor Device Analyzer

B1500A Semiconductor Device Analyzer of Precision Current-Voltage Analyzer Series is an all in one analyzer supporting IV, CV, pulse/dynamic IV and more, which is designed for all-round characterization from basic to cutting-edge applications. It provides a wide range of measurement capabilities to cover the electrical characterization and evaluation of devices, materials, semiconductors, active/passive components, or virtually any other type of electronic device with uncompromised measurement reliability and efficiency.

In addition, the B1500A's modular architecture with ten available slots allows you to add or upgrade measurement modules if your measurement needs change over time.

EasyEXPERT group+ GUI based characterization software is available either on the B1500A's

embedded Windows 7 platform with 15-inch touch screen or on your PC to accelerate the characterization tasks. It supports efficient and repeatable device characterization in the entire characterization process from measurement setup and execution to analysis and data management either interactive manual operation or automation across a wafer in conjunction with a semi-automatic wafer prober. EasyEXPERT group+ makes it easy to perform complex device characterization immediately with hundreds of ready-to-use measurements (application tests) furnished, and allows you the option of storing test condition and measurement data automatically after each measurement in a unique built-in database (workspace), ensuring that valuable information is not lost and that measurements can be repeated at a later date. B1500A provides the complete solution for device characterization with these versatile capabilities.

## B1505A Power Device Analyzer / Curve Tracer

The B1505A Power Device Analyzer / Curve Tracer is a single box solution for power device evaluation. Its broad measurement range from sub-pA to 10 kV/1500 A enables precise  $\mu\Omega$  on-resistance measurements. Additionally, its 10  $\mu\text{s}$  fast pulse capability enables complete power device characterization. This allows evaluation of new power devices such as IGBT and wide band-gap materials such as silicon carbide (SiC) and gallium nitride (GaN).

- Very wide current, voltage operating range up to 1500 A, 10 kV
- Supporting package and on-wafer device
- Accurate sub-picoamp level current measurement and  $\mu\Omega$  on-resistance measurement
- 10  $\mu\text{s}$  high power narrow pulse measurement
- Three-terminal capacitance (Ciss, Coss, Crss) measurement at up to 3000 V DC bias voltages and independent terminal capacitance (Cgs, Cgd, Cds) measurement
- Gate charge (Qg) measurement
- GaN current collapse measurement
- Automated thermal test from -50 °C to +250 °C
- Upgradable and scalable hardware architecture
- Oscilloscope View for current and voltage pulse verification
- EasyEXPERT software simplifies data management and data analysis

B1505A Modules	Description	Key specification	Max Number
B1510A	High power SMU	200V, 1 A (DC), 10 fA resolution	4
B1511B	Medium power SMU	100 V, 100 mA (DC), 10 fA resolution	10
B1512A	High current SMU	20 V, 20 A (Pulsed) 30 V, 1 A (DC)	2
B1513C	High voltage SMU	3000 V, 8 mA (Pulse and DC)	5
B1514A	Medium current SMU	30 V, 1 A (Pulsed) 30 V, 100 mA (DC)	5
B1520A	Multi-Frequency CMU	1 kHz to 5 MHz, $\pm 25$ V (internal bias)	1

## B1506A Power Device Analyzer for Circuit Design

The B1506A Power Device Analyzer for Circuit Design is a complete solution that can help power electronic circuit designers maximize the value of their power electronics products by enabling them to select the correct power devices. It can evaluate all relevant device parameters under a wide range of operating conditions, including IV parameters such as breakdown voltage and on-resistance, as well as three terminal FET capacitances, gate charge and power loss.

- Wide current and voltage operating range up to 1500 A, 3000 V
- 10  $\mu$ s high power narrow pulse measurement
- Automated thermal test from -50 °C to +250 °C
- Three-terminal capacitance (Ciss, Coss, Crss) measurement at up to 3000 V DC bias voltages and independent terminal capacitance (Cgs, Cgd, Cds) measurement
- Gate charge (Qg) measurement
- Power loss calculation
- Menu driven easy-to-use user interface (Easy Test Navigator – ETN)
- Quick and automatic device datasheet generation
- Oscilloscope view for current and voltage pulse verification

Category	Parameters
Threshold voltage	V(th), Vge(th)
Transfer characteristics	Id-Vgs, Ic-Vge, gfs
On resistance	Rds-on, Vce(sat)
Gate leakage current	Igss, Iges
Output leakage current	Idss, Ices
Output characteristics	Id-Vds, Ic-Vce
Breakdown voltage	BVds, BVces
Gate charge	Qg, Qg(th), Qgs, Qgd, Qsw, Qsync, Qoss
Gate resistance	Rg
Device capacitance	Ciss, Coss, Crss, Cgs, Cgd, Cies, Coes, Cres
Power loss calculation	Driving loss, Switching loss, Conduction loss

Model Number	Option	Description
		Power Device Analyzer for Circuit Design
B1506A	H21	20 A/3 kV/C-V/Gate Charge/Thermal Fixture Package
	H51	500 A/3 kV/C-V/Gate Charge/Thermal Fixture Package
	H71	1500 A/3 kV/C-V/Gate Charge/Thermal Fixture Package
	T01	Thermal Test Enclosure (Thermostream Compatible)

## B1507A Power Device Capacitance Analyzer

With the increasing use of power devices fabricated from emerging new materials such as SiC and GaN, switching power supplies are operating at increasingly higher frequencies. The B1507A Power Device Capacitance Analyzer meets this need, providing a complete solution for the evaluation of power device capacitance. The B1507A can help power device development engineers maximize product value and performance by revealing detailed device characteristics.

- Measure transistor input, output and reverse transfer capacitances ( $C_{iss}$ ,  $C_{oss}$ ,  $C_{rss}$ ,  $C_{ies}$ ,  $C_{oes}$ ,  $C_{res}$ ) at high bias voltages, and independent terminal capacitances ( $C_{gs}$ ,  $C_{gd}$ ,  $C_{ds}$ ,  $C_{ge}$ ,  $C_{gc}$ ,  $C_{ce}$ )
- Measure capacitances for normally-on devices such as SiC or GaN FET
- Measure gate resistance ( $R_g$ )
- Measure capacitance continuously as the gate voltage varies from negative to positive
- Easy to switch back and forth between leakage tests and capacitance measurements
- Wide operation voltage bias up to  $\pm 3000$  V
- Easy to use and fully automated measurement

Frequency Range	Capacitance Range	Maximum Collector / Drain voltage	Maximum Gate voltage
1 kHz to 1 MHz	10 fF to 1 $\mu$ F	$\pm 3000$ V	$\pm 100$ V
Category	Parameters		
Device capacitance	$C_{iss}$ , $C_{oss}$ , $C_{rss}$ , $C_{gs}$ , $C_{gd}$ , $C_{ies}$ , $C_{oes}$ , $C_{res}$		
Gate leakage current	$I_{gss}$ , $I_{ges}$		
Output leakage current	$I_{dss}$ , $I_{ces}$		
Breakdown voltage	$BV_{ds}$ , $BV_{ces}$		
Threshold voltage	$V_{(th)}$ , $V_{ge(th)}$		

$C_{iss}/C_{oss}/C_{rss}$  measurement up to 3kV

Gate Resistance Measurement

Device capacitance selector for automated CV measurement

## N6783A Application-Specific Modules

The N6783A-BAT Battery Charge/Discharge Module is a basic, 2-quadrant module designed to be used by battery-powered (mobile) device designers. The N6783A-BAT's 2-quadrant operation allows it to act as a power supply to charge the battery or as an electronic load to discharge the battery. When used in the N6705B DC Power Analyzer mainframe along with the 14585A Control and Analysis software, short- and long-term measurements for battery validation are made easy.

The N6783A-MFG Mobile Communications DC Power Module offers advanced features specifically for testing battery-powered (mobile) devices in manufacturing. The N6783A-MFG offers fast, accurate measurements and excellent voltage transient response to address the unique challenges associated with testing mobile wireless devices.

The N6783A-BAT and N6783A-MFG modules can be used with the N6700 low-profile mainframes for ATE and with the N6705B DC power analyzer mainframe for R&D.

- Optimized for basic battery charge/discharge application (N6783A-BAT)
- Optimized for mobile device manufacturing test (N6783A-MFG)
- Fast transient response ensures stable power supply output voltage
- Digitizing measurement system for flexible, accurate current measurements
- USB, LAN (LXI Core), and GPIB interfaces

N6700B

### N6700 modular power system mainframe

Model	Power, (W)	Max # modules
N6700B low-profile (ATE)	400	4
N6701A low-profile (ATE)	600	4
N6702A low-profile (ATE)	1200	4
N6705B DC power analyzer (R&D)	600	4

### N6783 Application-specific modules

	Model	Power (W)	Max voltage (V)	Max current (A)	Ripple and noise (mVp-p)	Programming accuracy % + $\mu$ V	Transient response ( $\mu$ s)
Specialty	N6783A-BAT	24	8	+3 to -2 A	8	0.1 + 10	$\leq$ 45
	N6783A-MFG	18	6	+3 to -2 A	8	0.1 + 10	$\leq$ 45

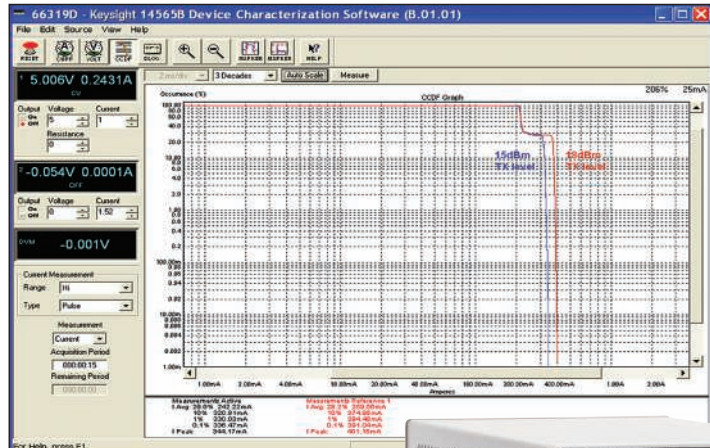

N6705B

## 66300 Mobile Communications DC Sources

66300 mobile communications power supplies are designed and optimized to help you test mobile wireless devices. They provide the DC sourcing, current sinking, and measurement capabilities to address the unique challenges of simulating batteries and battery packs and measuring the current drawn by your device under test.

- Fast DC power source to replace and simulate the battery during testing
- Fast voltage transient response ensures maximum test-system throughput by minimizing device shutdowns
- Dynamic measurement system enables accurate current measurement from  $\mu\text{A}$  to A
- When the 66319B/D and 66321B/D are coupled with the 14565B Software, it gives you a powerful analysis tool to optimize your device designs for long battery life

14565B

66321B  
66319B

## 14565B Device Characterization Software

- Graphical user software—no programming required
- 3 modes of operation: waveform capture, data logging, CCDF statistical analysis
- Visualization and analysis tools to help you identify anomalies and characterize and quantify battery drain to optimize your design
- Automation capability allows you to control the 14565B from other programs to automate and synchronize DUT activity with current drain measurements

Model	Power (W)	Maximum V (V)	Maximum I (A)	Number of outputs	Number of ranges	Ripple and noise mVp-p	Programming accuracy % + mV	Transient response ( $\mu\text{s}$ )	Size*
									Specialty
66309B/D	45	15	3 (5 A peak)	2	1	6	0.05 + 10	< 35	
66311B	45	15	3 (5 A peak)	1	1	6	0.05 + 10	< 35	
66319B/D	45	15	3 (5 A peak)	2	1	6	0.05 + 10	< 20	1/2 RU w
66321B/D	45	15	3 (5 A peak)	1	1	6	0.05 + 10	< 20	x
66332A	100	20	5	2	1	3	0.05 + 10	< 100	2 RU h

\* NOTE: RU refers to rack unit of a standard 19" EIA equipment rack. The width is either 1/2 or full. The height is in number of rack units which are 1.75" (44.4 mm) each. For example: a 3 RU h has a height of 5.25" (133.3 mm)

## E4360 Modular Solar Array Simulation

The modular solar array simulator (SAS) is a DC power source that simulates the output characteristics of a solar array. The SAS is primarily a current source with very low output capacitance. It is capable of simulating the I-V curve of different arrays under different environmental conditions (temperature, age, etc.). You can set the I-V curve from the front panel or program it over GPIB, LAN (LXI Core) or USB.

- Accurate simulation of any type of solar array
- Small size: up to 2 outputs in 2U of rack space
- High output power—up to 600 W per output
- Fast I-V curve changes to simulate eclipse or spin
- 14360A System Control Tools software included to simplify control of multiple solar array simulators in a system
- Custom turn-key system or individual instruments available

### E4360 modular solar array simulator mainframes

	Model	Power, W	Modules	Max # of modules	Physical size*
Specialty	E4360A	1200	Choose from E4361A and E4362A	2	Full RU w x 2 RU h
	E4367A	1200	Pre-configured with 2x E4361A	2	Full RU w x 1 RU h
	E4368A	1200	Pre-configured with 2x E4362A	2	Full RU w x 1 RU h

### E4360 modules

	Model	Power, W	Max Voc	Max Isc	Number of outputs	Ripple and noise mVp-p	Programming accuracy % + mV
Specialty	E4361A	510	65	8.5	1	125	0.075 + 10
	E4362A	600	130	5	1	195	0.075 + 20

\* NOTE: RU refers to rack unit of a standard 19" EIA equipment rack. The width is either 1/2 or full. The height is in number of rack units which are 1.75" (44.4 mm) each. For example: a 3 RU h has a height of 5.25" (133.3 mm)

## NEW N8937APV and N8957APV Photovoltaic Array Simulators

### Quickly Test and Optimize Inverter MPPT Algorithms for Improved Solar Power Production

The N8937APV and N8957APV Photovoltaic Array Simulator helps engineers develop, verify and maximize the performance of inverter maximum power point tracking algorithms. With its 1500Vdc output, the N8937APV and N8957APV enables designers to test to emerging solar panel technologies.

- 15 kW (1500 Vdc, 30 A) in 3 RU Chassis
- Parallel supplies up to 90 kW
- Curve & Table PV Simulation Modes
- Measure inverter efficiency over a variety of simulated conditions (varying temperature and irradiance)
- Verify the ability of the inverter to produce grid-level power from low to high voltage extremes
- PC based Software

N8937APV

N8957APV

Model	Power (W)	Maximum V (V)	Maximum I (A)	Number of outputs	Ripple and noise mVp-p	Programming accuracy 0.1% + mV	AC Output Voltage (VAC)	Size*
N8937APV	15000	1500	30	1	2400	≤1500	208	Full RUw x 3 RU h
N8957APV	15000	1500	30	1	2400	≤1500	400	

\* NOTE: RU refers to rack unit of a standard 19" EIA equipment rack. The width is either 1/2 or full. The height is in number of rack units which are 1.75" (44.4 mm) each. For example: a 3 RU h has a height of 5.25" (133.3 mm)

## NEW PA2201A IntegraVision Power Analyzer

See it, measure it, prove it

The IntegraVision power analyzer is an intuitive combination of accurate power measurements and touch-driven oscilloscope visualization. Within a single instrument, it delivers the dynamic views you need to see, measure and prove the performance of your design.

Make all of your critical power measurements with one instrument

- Achieve power analyzer accuracies and scope-like waveform visualization with reduced setup time
- Address multiple test scenarios with the flexibility of wide-ranging, isolated inputs
- Visualize transients, in-rush currents and state changes with a high-speed digitizer that captures voltage, current and power in real-time
- Analyze voltage, current and power in the time and frequency domains
- Explore you design and gain new insights through the 12.1"/310 mm high-resolution display with touch interface
- Save space on your bench with minimum-depth form factor

Function	Description
Basic power accuracy (50/60 Hz)	0.05% of reading + 0.05% of range
Power Channels (Voltage and Current)	2
Voltage Measurement Bandwidth (-3 dB)	2.5 MHz (-3 dB)
Current Measurement Bandwidth (2 A or 50 A Input)	100 kHz (-3 dB)
Current Measurement Bandwidth (External Input)	2.5 MHz (-3 dB)
Maximum Voltage	1000 Vrms (2000 V peak)
Maximum Current	Direct input: 2 Arms (6 A peak) or 50 Arms (100 A peak) External transducer: 10 Vrms (30 V peak)
Record Size	Maximum 1.5 M points on each waveform simultaneously
Digitizing Speed	Maximum 5 M samples/second at 16 bits on each waveform simultaneously
Display size and type	12.1-inch capacitive multi-touch/gesture enabled display
